

Portfolio Website

Project Documentation

Project: Personal Portfolio Website

Developer: Brijesh Burrewar

1. Project Overview

This project is a responsive Resume & Portfolio website developed to present academic qualifications, technical skills, experience, and contact information through a modern user interface. The website focuses on usability, branding, responsiveness, and professional presentation.

2. Objectives

- Build a professional online portfolio.
- Showcase academic and professional information.
- Create a unique visual identity.
- Ensure responsiveness across devices.
- Follow clean front-end development practices.

3. Technology Stack

HTML for structure

CSS for styling

JavaScript (ES6) for interactions

Git & GitHub for version control

GitHub Pages for deployment

Antigravity for accelerated UI development

4. Brand Kit

Logo: Custom BB monogram.

Typography: Space Grotesk, Outfit, Space Mono.

Colour Palette: Dark background with high-contrast accent colours to create a premium and readable interface.

5. Development Process

Requirements were analysed first, followed by wireframe planning, brand identity creation, page implementation, responsive optimisation, testing, deployment, and documentation.

6. Design Decisions

- Multi-page architecture improves organisation and navigation.
- CSS variables simplify theme management.
- Semantic HTML improves accessibility and SEO.
- Flexbox and Grid provide responsive layouts.
- Lightweight custom JavaScript reduces dependencies and improves performance.

7. Website Structure

Home
About
Academics
Experience
Contact

8. Features

Responsive navigation, animated hero section, academic timeline, experience section, contact form, custom favicon/logo, responsive layouts, GitHub deployment workflow.

9. SEO Improvements

Meaningful page titles, meta description, semantic headings, descriptive image alt text, clean URL structure, logical content hierarchy, performance-conscious asset loading.

10. Accessibility

Keyboard-friendly navigation, sufficient colour contrast, semantic HTML elements, scalable typography, descriptive labels.

11. Challenges & Solutions

Challenge: Maintaining responsiveness across screen sizes.

Solution: Combined Flexbox, Grid and media queries.

Challenge: Consistent branding.

Solution: Centralised typography and colour variables.

Challenge: Performance.

Solution: Lightweight assets and custom JavaScript.

Challenge: Browser security warning while running the project locally.

Solution: Verified that the warning was generated by the browser/operating system for a locally downloaded project rather than the application itself. The project was reviewed, sourced from the GitHub repository, and executed safely after user verification.

12. Testing

Tested on desktop and mobile layouts, navigation links, responsive behaviour, contact form interaction, browser compatibility, GitHub deployment, and verified that the project runs correctly after addressing browser security warnings for local execution.

13. Folder Structure

css/
js/

[.github/workflows/](#)
[index.html](#)
[other pages](#)

14. Future Enhancements

Dark/light theme toggle, blog section, project filtering, downloadable resume, backend-powered contact form, analytics.

15. Final Outcome

The completed website provides a modern, responsive, visually consistent portfolio suitable for showcasing academic achievements and professional capabilities while following front-end development best practices.

16. Conclusion

The project successfully meets the assessment objectives by combining clean design, responsive development, accessibility, branding, SEO considerations and maintainable code.
